

4.0.5.1

1.1 Version information

Installation Location

The decision relating to where to deploy the release is dependent on the agreement of those representatives of the business, Product Owners and DVSA Project Manager, and Application Integrator.

It is anticipated that this release will be installed on the following AWS Production Account Environments:

- Integration
- Pre-production
- Production

Application Components

The tagged release number in GitLab is Release 4.0.5.1 as a result of the delivery of the NYSIIS change.

This is a version of OLCS. The top-level tar file is called OLCS-4.0.5.1.tar.gz

There is a corresponding Java application, which needs to be deployed onto the TransXchange server. The file name is called nysiis-1.0.war

The code for release is available in AWS in the S3 Bucket. Each component has been uploaded and uses the same naming convention as for previous releases.

The following versions of the components of OLCS are provided:

Application Component	File Name	Version
OLCS Backend / API	olcs-backend-4.0.5.1.tar.gz	4.0.5.1
OLCS NYSIIS	nysiis-1.3.war	1.3

Configuration Components

A configuration change is required as follows (the changes are in blue):

// Nysiis configuration

```
'nysiis' => [  
  'soap' => [  
    'wsdl' => __DIR__ . '/../module/Api/data/nysiis/wsdl/nysiisUAT.svc.wsdl',  
    'options' => [  
      'soap_version' => SOAP_1_1,  
      'encoding' => 'UTF-8',  
      'local_cert' => '/path/to/inrcert.pem'  
    ]  
  ],  
  'rest' => [  
    'uri' => 'http://localhost:8080/nysiis-1.0/nysiis/convert',  
    'options' => [  
      'timeout' => 5  
    ]  
  ]  
],
```

1.2 High-level Installation Approach

This section describes the general approach to installing the software packages and scripts

OLCS Software

All software components are deployed with their relevant configuration files.

General Approach to the Installation

This applies to the installation of the Production Accounts:

Complete the infrastructure changes to cater for the new Java application (IA to complete)

Install the software components and complete their configuration

1.3 High-level description of functions

The main function associated with this release, which is an enhancement to the previous release, is:

- NYSIIS Service

1.4 Detailed description of functions

The specifics of the software function delivered can be viewed in Jira at:

<https://jira.i-env.net> using the OLCS Collaborative Board and the following search criteria:

Project = OLCS AND fixVersion = "Beta v4.0.5.1 (Hotfix)"

For completeness, the issues included in this release are:

OLCS-14322	NYSIIS REST Client
----------------------------	--------------------

1.5 Defects fixed

This release does not provide for specific defects.
